

Supernode API

This *HTTP GET*-API with JSON return works by requesting different URLs. The API is split into 2 different access levels.

- The user level that can be used by every user
- The reseller/admin level that can only be used by resellers or administrators

Syntax

```
https://pbxapi.mixvoip.com/$ACTION/$PARAMETERS?username=$USERNAME&password=$PASSWORD&JSON=$urlencoded-json-string
```

- JSON is an optional parameter only used for certain functions that require additional data

Note: Some actions do not need a username or password authentication.
